5.2 Emperical Strategy

Emperical Methods

Descriptive Statistics

Dependent Variable

Figure 1 below shows the distribution of the dependent variable. Since the statistics accounts for the number of emigrants, it can be considered as count variable. In order to account for population differences between countries, emigration is expressed in per capita terms. The shape of the distribution is very rightly skewed, which means that emigration is quite low in a large number of countries.

Figure 2. Histogram for Emigrants per capita

Figure 2. Histogram for Emigrants per capita

Among all the years, the country with the largest emigration per capita is the West Bank and Gaza. One can infer that the conflict in this region over time has affected the population movements drastically. The country with the lowest emigration per capita is Western Sahara. Even though there is a strong conflict in the region, free mobility in and out of the country is heavily guarded and limited by a 2,700 kilometer sand wall, also known as the Moroccan Wall. This can account for the lack of emigration throughout the region.
